

Fast switching & reverse conducting thyristors

ABB offers three lines of fast switching thyristors: the standard fast thyristor, the medium frequency fast thyristor and the reverse conducting fast thyristor. All types feature optimized and very short turn-on and turn-off times, large critical rates of on-state current rise, high surge current ratings and a wide operating temperature range.

These thyristors are typically used in induction heating resonant inverters, DC chopper drives, UPS, pulse power and other fast switching applications.

The **standard fast thyristors** feature an amplifying gate structure and a special lifetime control technology, ensuring low on-state and switching losses, a low reverse recovery time and a high di/dt performance.

The **medium frequency fast thyristors** take advantage of the distributed gate technology. Their special cathode and gate designs allow for an effective operation in the medium frequency range of up to 10 kHz.

The **reverse conducting fast thyristors** feature a monolithically integrated free-wheeling diode. Several types of this thyristor are available as spare and replacement parts.

Standard fast thyristors
